Filters are nothing
but the feature
detectors

Location invariant: It can detect eyes in any location of the image

flatten

flatten

Feature Extraction

Classification

Pooling layer is used to
reduce the size

5	1	3	4
8	2	9	2
1	3	0	1
2	2	2	0

8	9
3	2

↙

2 by 2 filter with stride = 2

Shifted 9 at different position

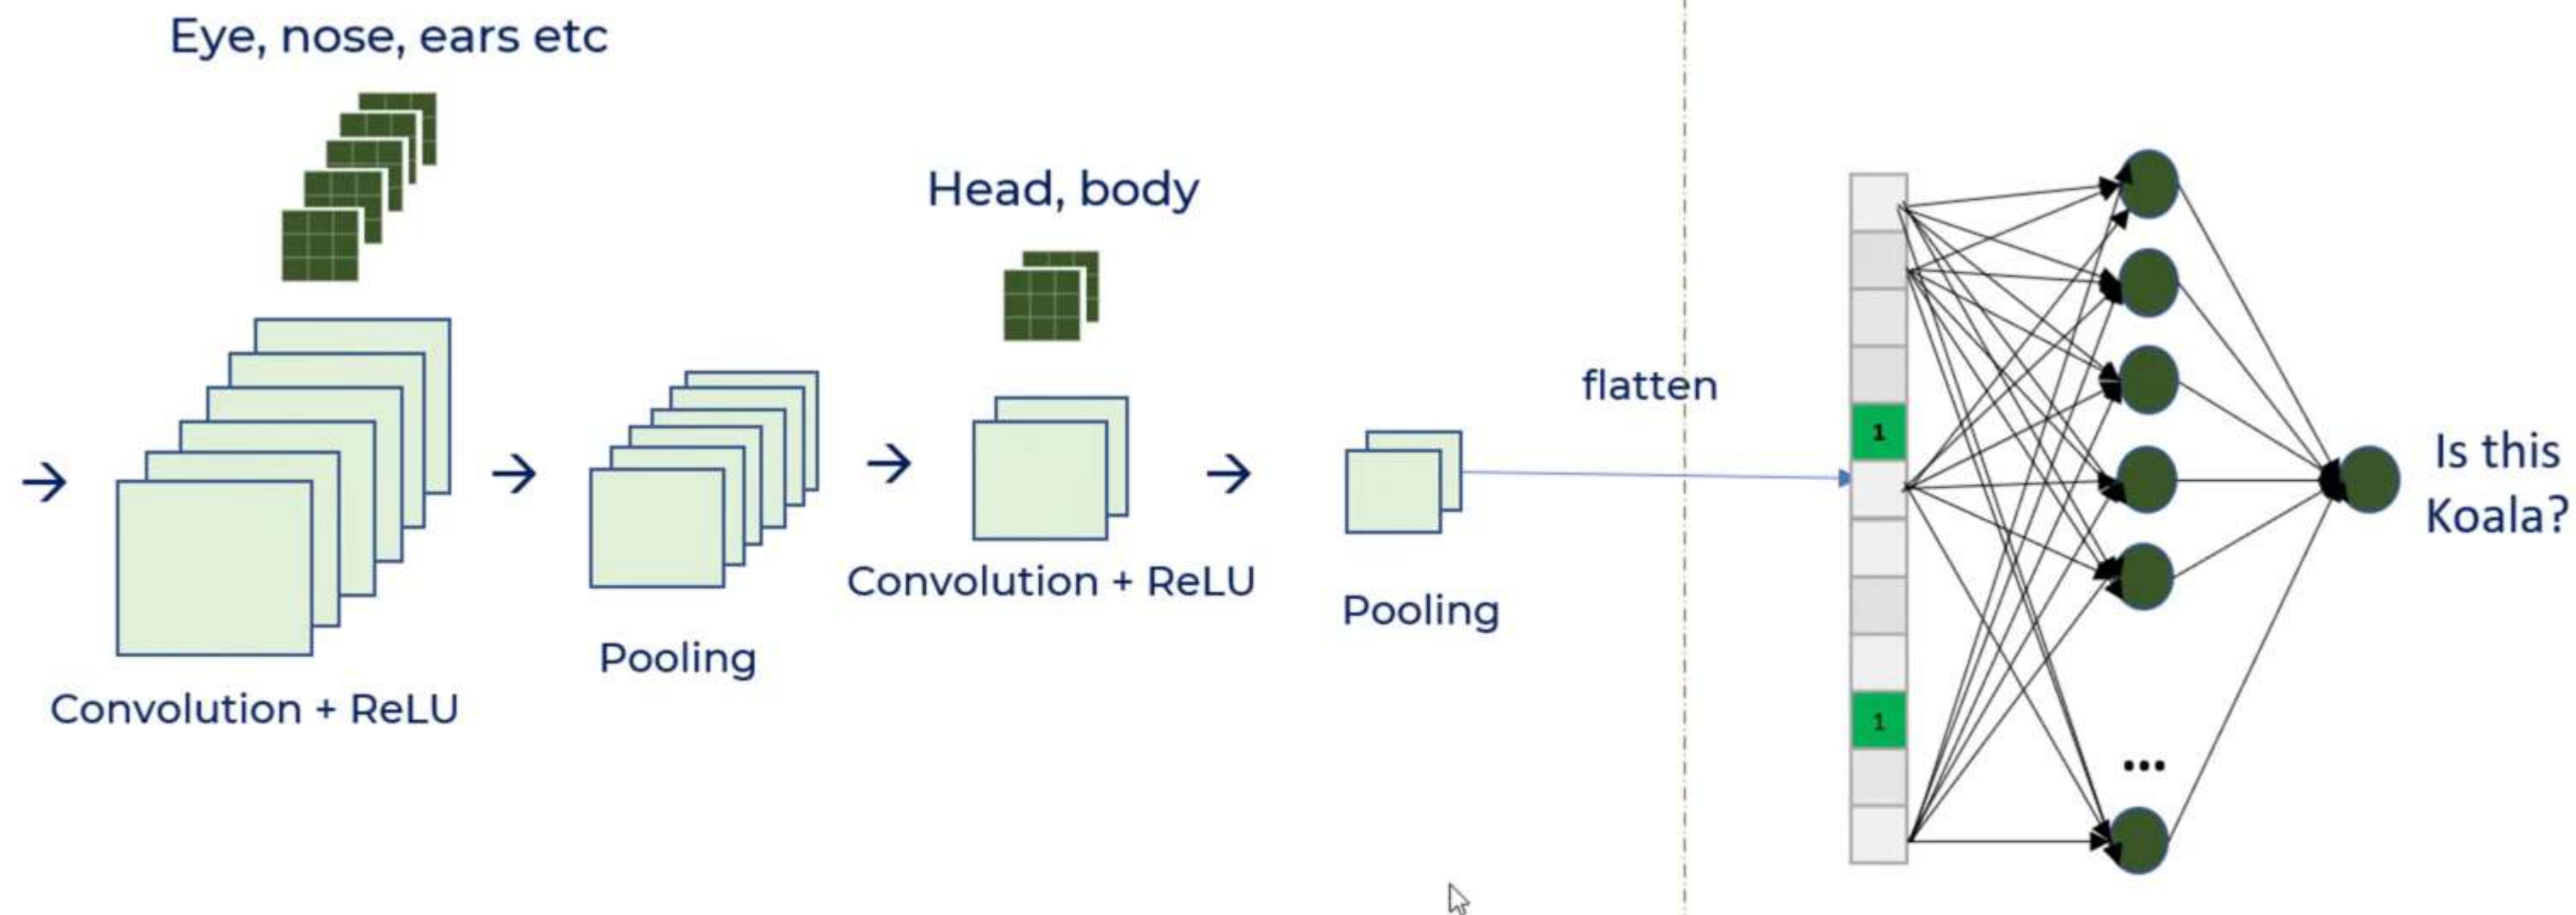

Benefits of pooling

Reduces
dimensions &
computation

Reduce overfitting
as there are less
parameters

Model is tolerant
towards variations,
distortions

Feature Extraction

Classification

Rotation

Thickness

CNN by itself doesn't take care of rotation and scale

- You need to have rotated, scaled samples in training dataset
- If you don't have such samples than use data augmentation methods to generate new rotated/scaled samples from existing training samples

PADDING IN CNN

0	0	0	0	1	1
